**Modifications in the way the lands are used in Câmpia Vlăsiei between 1900-1972
with special regard to the forest**

ABSTRACT

To reconstitute the use of land on cartographic material published between 1900-1972 we used the method of GIS, maps are georeferenced stereo projection in 1970. By overlapping them found the restriction forested areas at the expense of settlements, vineyards, orchards and agricultural land. The further deforestation was recorded between 1900-1943, registering a decrease of approximately 50%, mainly in the northern half of the Câmpia Vlăsiei. After the Second World War has been a slight revitalization of forested areas. Vineyards and orchards, which appear in the form of a mosaic have changes after 1950, due to replacement of existing varieties with large plantations. Meadow, spread throughout the area plain diminished standing in 1972 to 0.6% of agricultural surface. Lands increased over a period of approximately 70 years by 10% and settlements increased area, the periphery their extending the industrial platforms.
